

Summary

Data Engineer with a Computer Science degree from Bandung Institute of Technology (ITB). Proven ability to develop scalable data platforms and real-time data pipelines on Google Cloud Platform, Microsoft Azure, and on-premise infrastructure. Proficient in Python, Java, Go, and SQL. Expertise in database management systems including PostgreSQL, MongoDB, Elasticsearch, Redis, and Clickhouse. Skilled in orchestration and processing tools such as Apache Airflow, Apache Kafka, Apache Spark, Docker, and DBT, alongside data visualization platforms like Redash, Metabase, and Tableau.

Skills

- Programing Language:** Python, Java, SQL
Cloud Platform: GCP, Azure
Database: PostgreSQL, MongoDB, Elasticsearch, Redis, Clickhouse
Tools: Airflow, Kafka, RabbitMQ, Spark, Debezium, Nifi, Docker, Git, DBT, Redash

Experience

Software Engineer - Data **Cermati Fintech Group** **June 2025 - Present**
Jakarta, Indonesia

Cermati Fintech Group (CFG) is a company operating in the field of fintech (financial technology) that has been established since April 2015. Currently, there are five companies under Cermati Fintech Group and a data platform team responsible for all of the entity companies under CFG.

- Being a PIC for one of the most used services at the entire Cermati Fintech Group, event tracking services.
- Responsible for developing and maintaining the Redash data platform.
- Responsible for developing and maintaining Airflow and DBT.
- Work closely with the Business Intelligence and Infrastructure Team.

Data & Infrastructure Engineer **Intiva** **Sept 2022 - June 2025**
Jakarta, Indonesia

Intiva is an IT consultant and services company located in Jakarta with focus on software development, automation, machine learning, and big data analytics.

- Create data and RAG pipelines using Airflow, MongoDB, Rabbit MQ, Elastic Stack, and Celery Worker.
- Setup infrastructure and services monitoring, logging, and alerting using Grafana, Prometheus, Loki, and Promtail.
- Setup LLM services and playground using Ollama, Langchain, Langfuse, and OpenWebUI.
- Create data services API using FastAPI.
- Setup secret management using Hashicorp Secret Vault.
- Setup monorepo and CI/CD in the company code base.

Data Governance (Intern) **Sinar Mas Land** **April - July 2024**
Tangerang, Indonesia

Sinar Mas Land is a prominent real estate developer in Indonesia. I was part of the data governance team, with a focus on data engineering and integration responsibilities.

- Learn how to create metadata-driven data pipelines using Microsoft Azure Data Fabric.
- Create and maintain data pipelines in Azure Synapse Analytics and Azure Data Fabric.
- Migrate data pipelines from Azure Synapse Analytics to Azure Data Fabric.
- Create documentation regarding existing data pipelines in both Azure Data Fabric and Azure Synapse Analytics.

Project

NoSQL to SQL Data Transformation Tools (<https://github.com/ZianTsabit/MongoSequelizer>) **Nov 2024 - Feb 2025**

Build tools to perform ETL from doc-oriented NoSQL databases (MongoDB) to relational databases (RDBMS).

- Create an algorithm to create a relational schema based on available doc-oriented NoSQL databases automatically.
- Create an algorithm to perform ETL from doc-oriented databases to relational databases automatically.
- Create a python library based on the algorithm that has been created.
- Create backend (FastAPI) and frontend (NextJS) applications of the tools.

Crypto Adaptation in Indonesia (<https://github.com/ZianTsabit/tubes-big-data>) **June 2024**

Data products to get an insight of a crypto adaptation in Indonesia using Indodax public API/Websocket, Spark Stream Processing, Google BigQuery, and Looker Studio.

- Documentation: [Crypto Adaptation in Indonesia Project Documentation](#)

Visualization of Property Price Distribution Data **June 2024**

Static and interactive data visualizations of a property price distribution in the Jabodetabek area using Google BigQuery and Metabase.

- Static Visualization :  Perumahan Jabodetabek.png

Education

Bandung Institute of Technology
Informatics/Computer Science, GPA: **3.54 / 4.00**

- Thesis: Development of a Transformation Mechanism from Document-Oriented NoSQL Database to Relational Database.
- Completed modules: database management, AI & ML, parallel and distributed system, computer networks, big data technology, information retrieval system, data and information visualization.
